How did in 2014 move the project of a AECENAR applied research and startup-companies center?

The planned center:

- One of three institutes has been completed (MEAE with TEMO-IPP demonstration power plant)
- One project (TEMO-IPP) is now ready for commercialization in a start-up company
- Better connection to Lebanese University and Lebanese academic community (LASER)

Investment Offer

Dear sirs,

as-Salamu alaikum

Samir Mourad and AECENAR offer LASER the following:

LASER becomes investment partner in the AECENAR pilot Hepatitis B vaccine production plant MEGBI-VPP. The contract could be as in our last project between LASeR and Samir Mourad. MEGBI-VPP has three parts:

1. A Genetic Engineering Lab with Safety Level 2. This is necessary to transfer Hepatitis B virus DNA into *S. cerevisiae*
2. Upstream Facility (Bioreactor): to grow up cells and express the target DNA (the target protein is the vaccine)
3. Downstream Facility (Automated Protein Purification Devices): to purify the vaccine from the *S. cerevisiae* cells

The total investment sum of MEGBI-VPP plant is \$ 120.180 (please refer to the attached calculation). According to this sum an investment partnership could be established. The actual not finished plant is installed in Ras Nhache/Batroun. The laboratory is complete, but there are debts (about 19.000 USD) concerning the lab. Parts of the bioreactor are also completed. The main open task is the Downstream Facility. According to the calculation there is still missing about \$57.000 to finish the plant. It is planned to finish the plant from November 2014 until April 2015.

If the plant is finished, there is a potential client in Saudi Arabia (Nadim Tamim Mourad). The plant could then produce vaccines in licence for international companies as Sanofi. So the product must only be chemically identical to the original and no own qualification procedure is needed which would cost millions of dollars.

Ras Nhache/Batroun, 29.10. 2014

Investment for Future

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

The worldwide growth of disease creates an increasing demand for vaccination. On the other hand many new illnesses are discovered, which threaten the human health.

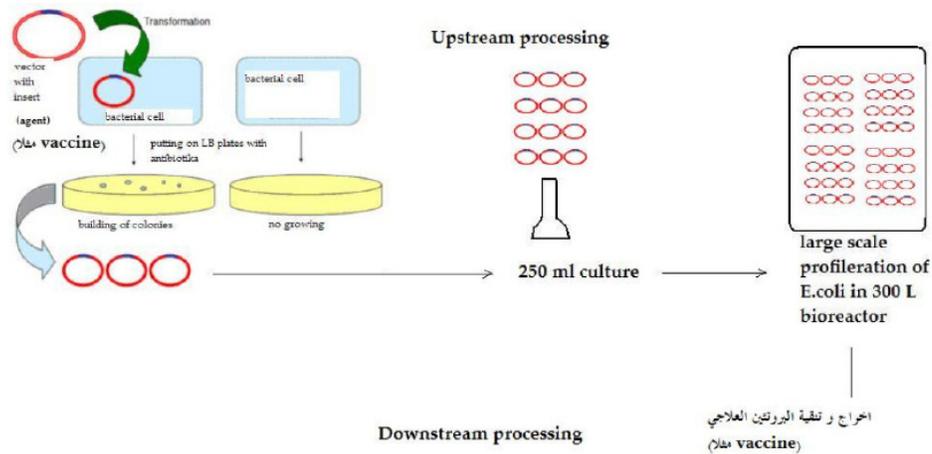

The modern biotechnology and genetic engineering technology offers DNA vaccination. Production plants for these vaccination method are easily adaptable for new diseases once the suitable DNA sequence for a new vaccine is known. So the production plant can e.g. today used for a vaccine against Hepatitis B and with little adaptation tomorrow for a vaccine against a new virus.

There are three main steps of production:

Step 1: Transferring of vaccine DNA sequence to the organism with multiplies and expresses the DNA (e.g. E.coli or S.cerevisae) (a **Genetic engineering lab** is required with at least Safety Level 2)

Step 2: Multiplying the organism with the foreign DNA in it in a **bioreactor**

Step 3: **Purification of the vaccine** out of the organism with was multiplied in Step 2

Cooperation between Europe and the Middle East

By the cooperation with Turkish and Arab partners the MEGBI-VPP project creates working possibilities for the young educated people in the Middle East region and helps to stabilize the region.

And with the help of God, the Almighty, this will be a big effort for a better and peaceful future for the two neighbour regions Europe and North-Africa/Middle East.

The genetic engineering laboratory of the pilot plant (for step 1) is based in North Lebanon at the nice village Ras Nhache. There were also undergone the prestudies of the project.

Bioreactor (step 2) and purification (step 3) will be implemented at TEMO Biotechnology site at Heidelberg, Germany

The administration of the project will be done by TEMO Biotechnology in Germany.

Contract of Participation of Nasser Ali Al Araimi on MEGBI VPP (Vaccine Pilot Plant)

§ 1 Project and Framework for the project

The project MEGBI VPP has the following contents:

Create a Vaccine Pilot Plant (planned 1-9 / 2015). Then customers will be won to build similar systems of TEMO Biotechnology leave (planned 2016-2020). This should be the profit (return on investment).

§ 2 Investment conditions

You can purchase the corresponding share of profits from an investment amount of 120 EUR.

It has MEGBI VPP a total value of EUR 1.2 million. That when, for example, 1200 EUR invested, you get 0.1% profit share. The profit shares to be distributed annually at the end of each year to participating investors (from end 2016 to end of 2020). Under the current plan is the profit of 2016-2020 a total of 2.64 million EUR, i.e. 220% of the investment. This profit is to be distributed to all shareholders.

§ 3 Capital redemption rights for the investor

The investor has the right to make with a 4-month notice until September 2015 to cancel the investment contract. Then he the total invest amount will be returned to him.

§ 4 Amount of investment and profit shares

Naser Al-Araimi invests 1200 EUR. In return, he receives 0,1 % of the profit. For details, see §2.

رسالة الى المجلس البلدي في راسنحاش: Project Status Dec 2014

بسم الله الرحمن الرحيم

حضرة رئيس البلدية السيد إيهاب قلاوون المحترم

حضرة أعضاء بلدية راسنحاش الكرام

تحية وبعد،

نحيطكم علماً بأنه وبحمد الله تعالى قد تم بنجاح تشغيل محطة الطاقة التي صممت خلف مسجد القبسي.

نقترح عليكم تشغيل المحطة على أرض تابعة للبلدية، فيتم عندها حرق النفايات وتوليد الطاقة لإنارة الطرقات بشكل دائم.

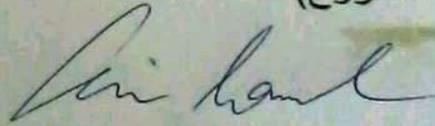

طاقة التوليد حالياً هي 130 أمبير يمكن ان تصل إلى 240 أمبير. التوليد يكون عن طريق توربين فهو بذلك لا يسبب ضجيجاً، وطبعاً يجب إستعمال الفلاتر لعدم تلويث البيئة.

سنجد بذلك حلاً جميلاً لمشكلة النفايات حيث تجمع من المنطقة كلها. كما يمكننا الإستفادة من الماء الساخن الناتج عن عملية التوليد، كما ونكون قد ساهمنا في خلق فرص عمل إضافية.

نحن على اتم الإستعداد للتعاون من اجل تقديم الأفضل لمجتمعنا.

(الرسالة مرفقة ب CD حول المشروع)

5.5.5 Project Planning and Control

Time Schedule / الجدول الزمني 5.6

Name	Start	Finish	2014			
			Jan	Apr	Jul	Okt
TEMO-IPP with LAsER	03.01.2014	19.11.2014				
establishing steady place for demo plant for incineration	03.01.2014	20.01.2014				
integration and working of experimental plant at Qubaisi lab	21.01.2014	23.05.2014				
Successful turbine test	12.05.2014	12.05.2014				
Demonstration Meeting with LAsER	23.05.2014	23.05.2014				
Construction and building of incineration based evaporator	13.05.2014	11.10.2014				
incineration integration to demo plant at Qubaisi center	03.10.2014	24.10.2014				
meeting with Liqa alkhair, film presentation	05.11.2014	05.11.2014				
final report (including photos of liqa)	13.11.2014	19.11.2014				

5.6.1 Contract between LASer and Samir Mourad

أولاً: تعتبر هذه المقدمة جزءاً لا يتجزأ من هذا العقد وتقرأ معه.

ثانياً: حدّدت كلفة المشروع التجريبي بمبلغ إجمالي قدره / 105,380 \$ توزع مناصفة بين الفريقين.

ثالثاً: دفع الفريق الأول للفريق الثاني مبلغ / 52,690 \$ ما يمثل قيمة مشاركته بالمشروع التجريبي وقد أقر الفريق الثاني باستلامه هذا المبلغ بواسطة خمس شيكات أرقام

.....

.....

.....

.....

.....

رابعاً: حددت مهلة تنفيذ المشروع سبعة أشهر تبدأ من تاريخ 1/3/2014 وتنتهي بتاريخ 30/9/2014

خامساً: يتحمل الفريق الثاني وحده مهام ومسؤولية المرحلة التجريبية مع كل ما يترتب عليها من إلتزامات من أي نوع كانت.

سادساً: عند انتهاء الفترة التجريبية وفي حال أبدى الفريق الأول رغبته بتسويق المشروع تجارياً يلتزم الفريق الثاني بتوقيع عقد شراكة مع الفريق الأول يتفق على شروطه لاحقاً على أن يتم تقاسم أرباحه مناصفة بين الفريقين.

وبكل الأحوال، لا يحق للفريق الثاني تسويق المشروع تجارياً في لبنان أو في الخارج سواء بشكل منفرد أو مع شركاء آخرين إلا بعد الحصول على الموافقة الخطية للفريق الأول وذلك تحت طائلة دفع مبلغ \$ 50,000 كبديل عطل وضرر للفريق الأول.

سابعاً: حرر هذا العقد على نسختين أصليتين بيد كل فريق واحد .

In this project phase the following steps had to be done in 2014 (Planning)

Item	Achieved?
Migration of former Lotte FCS to SAT control system	No
Satellite Mock-up model	(Yes)

5.7.2 Status of project in Dec 2013

Satellite System for Radio Astronomy IAP_SRWDA-SAT

Last update: 17 December 2013

Electric Propulsion for orbit and attitude stabilization

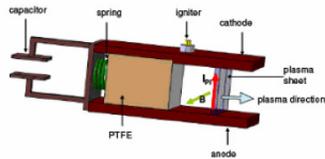

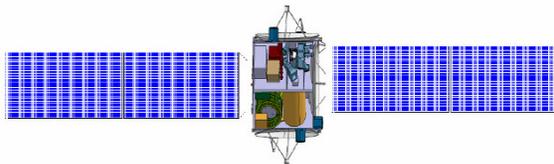

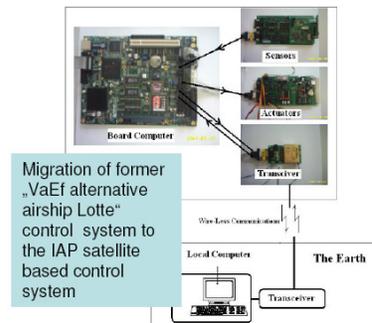

Figure 1. Working Principle of an I-MPD

First Mockup Model

Detection of HI Lines in Interstellar Media

Actual Working Packages:

- Refinement of the first Mockup Model
- Development of Prototype with parts of IAP ECS and alternative Lotte FCS
- Mission Simulation
- Simple Prototype for the MPD Propulsion Device

Financial and man power needs for 2014:

- 2-3 persons (e.g. as master theses)
- 4.500 USD material

5.7.3 Status of project May 2014

Figure 25 Mock up model

5.7.4 Main goals achieved:

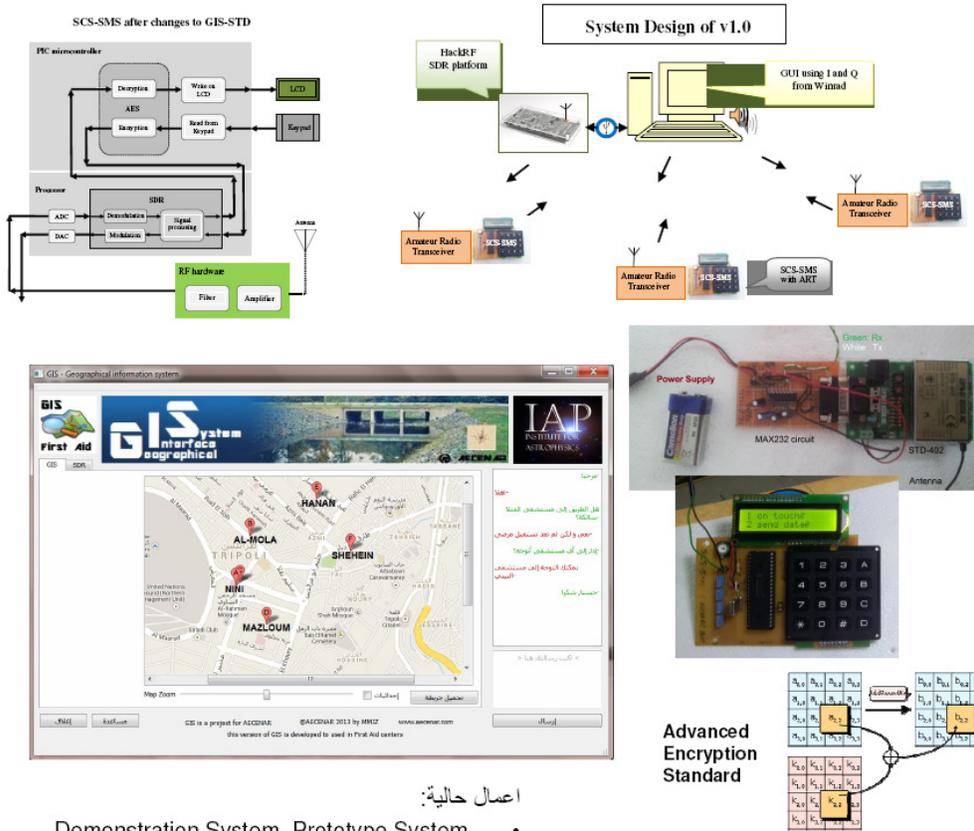

- Specification of SAT clear: scientific surveillance as Dubai-SAT & radio astronomy SAT
- Radio astronomy sensor
- Communication system partly developed (Software designed radio in IAP_SRWDA)

5.7.5 ECS for IAP Sat

Emergency Communication System

شبكة اتصالات آمنة للطوارئ و الاسعافات

Last update: 17 January 2014

اعمال حالية:

- Demonstration System, Prototype System

الحاجيات لعام 2014:

- 2 اشخاص
- \$5.000 للمواد

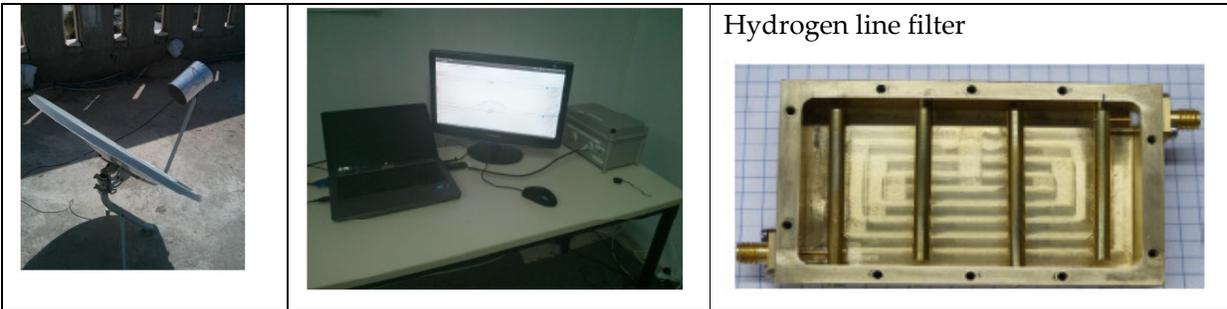

Decision: IAP_ECS to merged with IAP_SAT

5.8.3 Facit

Project Goal was achieved. Decision: Project to be merged with IAP-SAT.

For future: if a student comes from out of Lebanon, then an appropriate housing has to be managed before he comes.
